

Product Usage

Cooling Response Pain Cream

Our New Cooling Response Pain Cream is a MEDICATED Cream, which means we have added 3% Menthol, 2% Camphor, 2% White Willow Bark, 1% Eucalyptis, and 1% Peppermint to the Cream as well as our main ingredient - 850mg of CBD added as Full Spectrum Hemp Extract. We use Aloe Vera as the Base for better and more rapid absorption. With all of the added herbs and oils, you get a rapid and powerful response for muscle and joint pain and soreness. Because of the strong and powerful combination, you should definitely avoid using the cream on or near the face and sensitive areas. The cream is totally safe and can be applied as heavily and often as needed to achieve the desired results.
